

NEW! Generator Standby Switch

A new meter collar device that makes connecting a portable generator safe and simple!

Consolidated Electric is now offering a generator standby switch that mounts behind your electric meter.

Eliminate Extension Cords

This switch allows you to safely connect a portable generator without having to run extension cords throughout your home to appliances.

Easy to Use

Once the generator is plugged in, the generator standby switch disconnects your home from the electric grid and connects it to the generator. Then you can control which appliances you want to use by flipping the breakers in your existing electric panel. No special wiring is needed for 100 or 200 amp residential electrical service.

Easy on the Budget

At just \$9.99 per month, this generator standby switch is an economical choice to eliminate the inconvenience of a power outage. (Monthly fee includes installation.)

Extra Surge Protection

You also have the option of selecting a generator standby switch that includes surge protection to protect the major appliances in your home for just \$12.99 per month. (Monthly fee includes installation.)

Purchase Option Available

The generator standby switch is also available for purchase at just \$525 without surge protection or \$650 with surge protection. Cords are available at an additional price, depending upon length desired. Purchase price does not include installation.

Safe: Safely connect a portable generator and eliminate risky do-it-yourself solutions.

Simple: Takes less than a minute to connect your generator when you need it.

Flexible: Get total flexibility and total control. Simply select the appliances you want to run using your home's electric panel.

I want a Standby Generator Switch installed on my electric meter (\$9.99/month).

I want a Standby Generator Switch with surge protection installed on my electric meter (\$12.99/month).
